

Cleaning Your World

MainPro

MainPro cleansing software is the central pivot for your tank cleaning activities. From the entering of cleanings, to the management of your customers, to the monitoring of the cleaning process and the generating of invoices. The various modules ensure that you can perfectly control your cleaning process.

MainPro Core Application

The basic design of *MainPro* Basic software enables you to easily register and check all steps in the cleaning process.

✔ Management of Customer Data

Customer-relevant data like addresses, contact persons and accompanying registration numbers can be saved and managed in the customer database.

✔ Management of Product Information

All product-specific information can be saved and managed in the product database. Safety instructions and washing programmes can be linked with products.

✔ Entering of Cleanings

Cleanings can be programmed and washing zones can be pre-selected. The up-to-date status (waiting, cleaning, finished) of all cleaning services is conveniently displayed on one screen.

✔ Printing of European Cleaning Document

After a cleaning service has finished, the ECD can be printed according to the layout as determined by the EFTCO.

✔ Exporting of Data

MainPro software makes use of an SQL database. This makes it possible to export the data to, for example, your own invoicing software.

✔ Planning Tool

The cleanings can be divided over various washing zones on a digital planning board.

✔ Truck Wash

MainPro also provides the possibility to print a washing ticket for external cleaning services.

MainPro in Practice

- Setting up of different user levels
- Data export to Excel or financial software is possible
- Easy sorting and searching of data
- Multiple languages selectable
- Additionally, the software offers full possibilities for plug-ins and custom-built reports, providing you with tailor-made software that is tuned to your requirements.

Secured tank cleaning

MainPro Cleaning Guard

With the Cleaning Guard module it is possible to clean the tanks with automatically-operated washing programmes that are based on residues. Working with pre-set programmes limit operational and human errors to a minimum. The selection of the washing programmes is determined by the previous load of the truck, the experience of the operator and/or the end-user's requirements.

✔ Guarantee of Quality

Various parameters (duration, temperature, dosage, programme finish and disinfection) are continuously validated by the PLC during the cleaning. If one of these parameters does not meet the required value, the PLC will repeat this step.

✔ Certificate

The system only issues a MainPro Cleaning Guard cleaning certificate if a cleaning has been finished correctly. If required, it is possible to carry out additional tasks (such as rinsing or pre-washing) by manual operation, but it is not possible to carry out fewer tasks. With this you can show your end-customer that the cleaning method instructed by the customer was carried out faultlessly.

✔ Data Capturing

All data will be saved in a database and can be used to generate reports for both operational and management information as well as for quality purposes. Examples of this are the course of temperature of the rinsing water during the washing process and the total number of washing services in a certain period of time per client/carrier.

MainPro Core Application

Management of customer data, management of product information, entering of cleanings, printing of ECDs, exporting of data, planning tool & truck wash

Cleaning Guard module

Automatic selection of washing programmes, matching of washing tickets via unique numbers, fixed required parameters, registration data in database, PLC connection, secured cleaning, reports with diagrams and cost analyses.

Invoicing module

Generate invoices automatically, credit invoices, advanced settings, extensive CRM

Online Webportal module

Integrated into your own website, price quotation, copy of application (certificate, invoice, etc.)

Pre-announce module

Driver pre-announcement, reduce waiting times

MainPro is a joint development of Gröninger Cleaning Systems B.V. and Lucrasoft Solutions B.V., which combines the best of both worlds. Gröninger is the prominent producer of tank cleaning systems. Lucrasoft has been active in supplying tailor-made software in the transport industry for years.
